

Analysis of the reasons why the solar powered light automatically turns on

Overview

Manual solar on/off switch is usually located inside the solar light. As an example, if we took a garden solar light, the switch is under the top cover of the product. Wall-mounted or flood-type solar lights have the switch under an area where it is hidden from the raindrops. A solar light operation mechanism is pretty simple. It is powered by sunlight. It takes energy from the sun and turns it into electricity that powers up. Yes. After buying solar lights, you should unpack them and turn the ON switch. Now do not use your solar lights right away. Let them fully charge for the whole day. When the sun goes down, turn. Many new users do not realize that their solar lights have an on/off switch that needs to turn on. The light is turned off while they are in the. It is not necessary to switch ON to charge your solar lights. They can charge themselves even when the switch is turned off. But, keep it ON.
