

# Are ups batteries good

## Overview

Sealed lead-acid (SLA) batteries are a good choice for uninterruptible power supplies (UPS) due to their reliability, maintenance-free nature, and safety. Lead-acid and lithium-powered batteries are the two main types to consider. Both types of batteries offer power and protection, but which is right for your application, budget, and power needs?

These small, affordable power units act as a power source for your sensitive electronics in case of a power outage. But will they keep your WiFi running long enough, and if so, do they all perform the same?

To answer that question, I put these three units to the test. CyberPower UPSes are great for weighing down the bottom of a rack so it isn't top-heavy and for keeping paper from blowing away in a light breeze. If the battery isn't healthy or right for the job, your UPS can't save the day. It's like a. UPS batteries are a major contributor to these priorities, as data center managers demand energy-efficient technologies to ensure business continuity, extend operational life, and reduce total cost of ownership (TCO).
