

Austria energy storage batteries are maintenance-free

Overview

In the future Austrian Electricity Market Act (EiWG), electricity storage will be regulated for the first time, placing them on an equal footing for grid connection and, if operated in a system-friendly manner, batteries will be exempted from grid usage fees, among other things. Battery storage is the key to grid stability in Austria in 2026. Storage demand will increase eightfold to 8.7 GW by 2040 to enable 100% renewable electricity by 2030. The Slovenia-headquartered firm has installed the project in Ardnoldstein, which is now grid-connected and participating in the electricity market. NGEN commissioned Austria's largest battery energy storage system (BESS). Located in Fürstenfeld, in the country's southeast, the facility has 24 MWh in capacity and a maximum output of 12 MW. The company estimates up to 30% cost savings if the module enters.
