

Energy storage box shell mold installation method

Overview

How do you mold a hot core box?

Mold structure of water-cooled shell of the hot core box. The core methods of the hot core box are as follows: the moving pallet core method, the ejector rod core pulling method and the rotary core pulling method. Outdoor energy storage power supply mold installation at allows seamless expansion to meet growing energy demands. I standards, including GB/T 36558, IEC 62933, UL1973, and UL9540A. The invention relates to the technical field of injection molding production, in particular to an injection mold for an upper cover of a large energy storage box, which comprises a fixed mold (3), a core pulling system (4), an ejection system (5), a pouring system (6) and a movable mold (7). Our high-performance injection molded enclosures for energy storage connectors are crafted to deliver exceptional precision and durability. Please read this Manual carefully for the safety information and the functions and features of the liquid-cooled safety warnings on Device or environments.
