

HJT photovoltaic panels

Overview

Heterojunction solar panels are assembled similarly to standard homojunction modules, but the singularity of this technology lies in the solar cell itself. To understand the technology, we provide you with a deep dive. Heterojunction solar panels work similarly to other PV modules, under the photovoltaic effect, with the main difference that this technology uses three layers of absorbing material. Heterojunction technology is based on traditional c-Si panels, improving the recombination process and other major flaws. In this section we compare how both technologies differ. The structure of bifacial panels is similar to the heterojunction solar panel. Both include passivating coats that reduce surface recombination, increasing their efficiency. HJT technology. Heterojunction solar panels can be quite beneficial since they have an improved technology with great potential in the solar industry. These are some major benefits of the technology.
