

Homemade solar panels made from foam boxes

Overview

"Build a wooden frame, insulate with foam-board, paint the inside black, use screening to capture the heat and then cover everything with an Acrylic sheet. An enclosed box, insulated against the cold, takes air from indoors and heats it up by absorbing. I researched several builds, explored what materials I could grab locally and figured it was time I built my one myself. And then I had time to think about it a bit. The idea was pretty straight forward. We might be returning to our roots but we're still living in the modern era - we're not homesteaders to turn. This passive heater will save you money, too! Build this window heater that uses the sun's energy to heat your home or garage in the winter. No more drilling holes through the wall or rigging power hungry fans to blow air through your solar heater. By opting for a DIY approach, you can significantly reduce your energy bills and contribute to a greener planet.
