

Is the lamp that scares wild boars powered by solar energy

Overview

A solar-powered flashlight, Parabraksh, generates light flashes to scare animals away from the fields, without harming them. When Malan Sambhaji Raut got a borewell installed in 2016, she. Strobe flashing red light creates a realistic fire-like effect to deter and scare away wild animals, including wolves, boars, and other nocturnal predators, protecting your garden, yard, and property. It works well in a wide range of terrains and for many types of creatures, both large and small. Simply place the lights outside, where they can be seen up to ½ mile or more and facing. In 2020, a local non-profit called Swayam Shikshyam Prayog in Latur made her install a device called Parabraksh (which in Kannada, the language of the southern state of Karnataka, means protection from wild animals). Powered by solar energy, these lights automatically charge during the day and operate at night, flashing red to imitate flames and effectively repel predators like wolves. ☐☐ Smart PIR Detector, Pinpoint Response: Thanks to the PIR motion sensor, it only detects approaching creatures, so it does not work randomly; both effective and energy efficient. This repeller device uses an advanced PIR motion detection system to identify movement, triggering powerful ultrasonic.
