

Israel's new energy storage power station

Overview

28 (Xinhua) -- Israel's Finance Ministry announced on Sunday that a new solar power facility with battery storage will be built at the Ashalim power station in the country's south. As a key national infrastructure project in Israel, the power station is located in the Gilboa mountain range in northeastern Israel. It is the country's second and largest pumped storage power station. The station consists of an upper reservoir, a water conveyance system, an underground powerhouse, a lower reservoir. Israel's largest pumped storage power project officially began commercial operation on February 21, after receiving its electricity production license from the Israeli Ministry of Energy and Infrastructure's Electricity Authority. Wartsila has been selected as the preferred contractor for the Eraring Power. The Israel Government through the Electricity Authority (IEA) and Israel Electric Company (IEC) is encouraging the private sector to initiate and operate private alternative power systems.
