

# Legal considerations for deploying BESS in solar-powered communication stations

## Overview

It briefly summarizes the market forces and land-use issues associated with BESS development, analyzes existing regulations for these systems, and offers guidance for new regulations rooted in sound planning principles. Grid-connected BESS regularly take the form of one or more shipping containers with ventilation equipment on the outside and row upon row of batteries and control systems secured inside. These systems are being deployed as part of utility substations and transmission systems and as part of solar. Battery Energy Storage Systems, or BESS, help stabilize electrical grids by providing steady power flow despite fluctuations from inconsistent generation of renewable energy sources and other disruptions. ZBA Walpole, municipalities may not prohibit ground-mounted solar outside of an overlay. The American Clean Power Association (ACP) is the leading voice of today's multi-tech clean energy industry, representing over 800 energy storage, wind, utility-scale solar, clean hydrogen and transmission companies. Globally, growth of grid-scale BESS in 2024 grew 52% compared to 25% market.
