

Long flexible solar panels

Overview

Flexible solar panels are thinner, lighter, and more versatile than standard solar panels, capable of bending around a corner or over a bump in your roof. That's because they're made of much less substantial silicon. They're great for off-grid, on-the-move applications – like camping holidays, or for powering your boat – because they're light and can wrap around pretty much any shape. You can. The cost of flexible solar panels will depend on whether they're being used to power a house or a vehicle. To help, and give you a better idea of what you can expect to pay, we've broken do. Though they work in much the same way as standard panels, there are some key differences. There are two types of flexible solar panels: thin-film panels, and crystalline silicon. Flexible solar panels generally last 5-10 years. This is a considerably shorter lifespan than traditional panels, which typically have 25-year warranties, and can often last even lo.

Article Content

What makes flexible solar panels inferior compared to rigid ones?

The simplest answer is that plastic doesn't last as long in the sun as glass does. Flexible panels are covered in plastic and that degrades surprisingly quickly when it's in the sun all the time ...
