

Mexico invests in solar power

Overview

Private companies will invest US \$4.75 billion to build 20 renewable energy projects across 11 Mexican states, Energy Minister Luz Elena González announced Wednesday. To complement the private initiatives, the government is building or planning three more solar plants and investing nearly \$2 billion. In a significant boost to its renewable energy landscape, Mexico has recently approved 20 new renewable energy projects, including 15 solar initiatives that collectively add 2.5 GW. This decision, made by the energy ministry, signals a robust commitment to revitalizing the sector. Mexico is seeing a surge of large-scale solar and battery storage proposals across multiple states following an October decree that sets clearer rules for private energy investments. 8 GW by 2035, while wind power also expands and natural gas remains the backbone of system reliability, according to GlobalData and Ember. Already one of the top five global leaders in renewable energy, the country is on track to reach a 25% share of electricity generation from renewables by 2035. The new laws define six pathways for private sector participation in electricity generation: 1.
