

New energy battery constant temperature system detection

Overview

Battery temperature management is the core technology of new energy vehicles concerning its stability and safety. Starting with the temperature management, this paper establishes mathematical and physical model. Battery temperature management is one of the core technologies in the stability and safety of n. 2.1. Mathematical model Assuming that the heat power generated by the battery per unit volume is fixed, the mathematical-physical model based on energy conservat. 3.1. Cone angle When the cone angles are 0° , 60° and 90° , respectively, and the different shapes of the battery modules will influence the temperature tran. Fig. 6(a) shows the diagram of the battery module experimental system. It is mainly composed of three parts: cooling medium flow loop, heat source simulation system and measureme. Battery module temperature management focuses on optimizing the distribution method of liquid cooling modules and improving the heat transfer efficiency of battery modules.
