

Niger solar module project construction

Overview

The project for the construction of four solar photovoltaic plants, each with a capacity of 10 MW, in the Maradi and Dosso, regions, aims to satisfy the growing power demand in Niger and encourage regional development by exploiting abundant solar resources in the areas concerned. A signature ceremony was held yesterday in Niamey attended by Excellency Ibrahim. Niger is taking significant strides to address its energy challenges, as new solar projects begin to transform the landscapes of Niamey and Zinder. ty to generate electricity from renewable sources; and (ii) the population's improved access to modern energy services. The expected outcomes are: (i) solar-based electricity generation capacity is increased; (ii) household access to electricity via the grid and f renewable energy generation. The Niger Solar Electricity Access Project (NESAP), aimed at enhancing electricity access in rural and peri-urban areas of Niger through solar energy, started in 2017 and has built 15 solar power plants.
