

Nuclear power plus solar power

Overview

In partnership with the National Renewable Energy Laboratory (NREL) and Westinghouse, they're designing an integrated energy system that combines a next-generation nuclear reactor and a concentrating solar power plant. At the University of Wisconsin-Madison, Ben Lindley, an assistant professor of engineering physics and an expert on nuclear reactors, and Mike Wagner, an assistant professor of mechanical engineering and a solar energy expert, are studying the feasibility and benefits of such a coupling. In. Nuclear energy taps into the heat released from fission reactions to make electricity. Fission splits large atomic nuclei into smaller nuclei, releasing insane amounts of energy in the process. Each offers a series of advantages and challenges that make them unique in the global energy landscape. [3-6] Since the majority of operating nuclear power plants have at least 2 reactors like Diablo Canyon, let us. Solar power generation globally is expected to surpass output from nuclear reactors for the first time this summer, reported Reuters.
