

Outdoor solar power supply is out of power

Overview

Most homeowners with solar on their homes have what is called a “grid-tied” solar system, which means the panels are connected to an inverter. The inverter is connected to the main AC panel in the house and to a special smart electric meter that records both energy you use from the utility company and energy. If you want to keep your home up and running when the power goes out, there are a few ways to do so: 1. Use a backup gas generator 2. Add solar. The reliability and lifespan of solar panels is excellent, according to a recent study by NREL. The researchers looked at 54,500 panels installed between 2000 and 2015. They found that each year, a scant 5 out of 10,000 panels failed. People who want to get off fossil fuels completely and ensure that only clean energy passes through their wires might be tempted to go off-grid completely. And that certainly is an option. Since solar panels depend on the sun they won't be much good at night and will produce less energy depending on the season. Luckily, there two easy ways to overcome this obstacle: 1. Net metering: A law known as net metering.
