Image: TerraFlow As the US looks to power systems more profitable. Flow batteries are durable and have a long lifespan, low operating. Associate Professor Fikile Brushett (left) and Kara Rodby PhD '22 have demonstrated a modeling framework that can help guide the development of flow batteries for large-scale, long-duration electricity storage on a future grid dominated by intermittent solar and wind power generators. Here's why they may be a big part of the future — and why you may never see one.
