

The battery warning light is on

Overview

The battery light may be on because the alternator belt is broken or slipping. It could also be due to a worn alternator, a bad pulley or damaged wiring. There's also the chance that the battery is bad, there's corrosion on the terminals or the engine ground strap is bad. Here's our video with the reasons why your battery. At the first sign of the battery warning light, it's best to pull the car off in a safe location to diagnose the system. You don't want to keep driving because the battery and/or alternator could fail at any time. Once you have a place to look at the. The vehicle may still continue to run normally for a short time, so there would be nothing stopping you from driving even though the light is on. The battery light indicates low voltage, showing trouble with the charging system. While it can mean a problem with the alternator, it could also be. It can indicate that something is wrong with the alternator and the battery isn't getting the right charge. It could also show a problem with the battery, serpentine belt, alternator pulley, electrical connection or there's a possibility of.
