Overview

Despite notorious complexity, there are a few key milestones shared by all microgrid projects: offtake agreement closed, financing closed, notice to proceed for construction (NTP), commercial operation date (COD), and decommissioning. By now everyone knows the demand forecast numbers for powering new data centres. In. A microgrid is a group of interconnected loads and distributed energy resources within clearly defined electrical boundaries that acts as a single controllable entity with respect to the grid. Coalition stakeholders include the City of Oakridge, South Willamette Solutions, Lane County, Oakridge Westfir Area Chamber of Commerce, Good Company/Parametrix, Oakridge Trails. By sidestepping the need for a central controller and its need for communication in a microgrid configuration, NREL has developed a simpler path for deploying microgrids quickly. Having been involved in hundreds of microgrid projects leads to some emerging patterns. It takes a lot of effort to make a project happen.
