

The purpose of blasting wind towers is

Overview

As of March 2025, over 12,000 aging wind towers globally require decommissioning—a 300% increase since 2020. Controlled blasting has emerged as the go-to solution, but why exactly do engineers choose explosives over traditional dismantling?

Wait, no—it's not just about. Meta description: Discover why controlled blasting of wind towers solves modern infrastructure challenges. Explore demolition methods, safety protocols, and global case studies in this technical deep-dive. But what happens. Cooperation between Blastman Robotics and Windar began in the year 2019 when Blastman was tasked to provide an automatic solution for wind turbine tower exterior surface blast cleaning to replace manual blast cleaning. Cast parts, components and steel plate/sections are cleaned. The double whammy of coastal or marine of salt and water can accelerate the process of corrosion. We offer equipment rental, training, and technical support, along with facility modernization and productivity enhancements.
