

Vienna Zero Carbon Energy Storage Project

Overview

3 million from the Innovation Fund, ScaleUp will construct a 20 MW underground thermal energy storage system in Vienna, storing excess summer heat for use in winter. Summary: Explore how Vienna's advancements in energy storage systems are transforming industries like renewable energy integration, smart grids, and urban infrastructure. This article analyzes key technologies, real-world applications, and future trends – with data-driven insights for businesses. A pilot plant for continuously operated temperature swing adsorption (TSA) is designed with focus on scalability and built at the site of the biomass combined heat and power (CHP) plant Vienna/Simmering. Tests with real combustion exhaust gas and over several hundreds of hours deliver solid figures. The demo operation of hydrogen production and storage in the USS2030 project has been successfully completed, showing that it is technically possible to offer hydrogen storage services on a scaled and commercial basis in depleted underground gas reservoirs. Homepage, TU Wien, TUW "Technology for people". Everything about: studies, research, partnerships, services.
