

Which electrical cabinet should be used with solar panels

 LFP 12V 200Ah

Overview

This selection guide is intended to provide guidance and clarification to assist with the selection of electrical enclosures, electrical cabinets and 19" rack cabinets. Following this guide will help to optimise the life of enclosures and internal components. This selection guide applies to empty enclosures for low voltage switchgear. There are many factors to consider when choosing an electrical enclosure or electrical cabinet. Step 1. Determine the IP Rating to suit the application Step 2. Select the material to suit the environment Step 3. Calculate the size. An important decision when choosing an electrical enclosure, electrical cabinet or 19" rack cabinet is to select the IP ingress protection rating and IK. The size of the enclosure is determined by the components and cables being housed. This includes minimum distances around components and cables. It is important to check the installation. Material is selected based on the application, environment and location. Factors impacting selection may include strength of materials, resistance to corrosion, thermal stability, resistance to UV, mechanical impact.
